T725, Uued asümmetreerilise sünteesi strateegiad ja meetodid, teema juht Lopp Margus
New strategies and methods of asymmetric synthesis

The main goal of the project is to develop methods of the asymmetric synthesis by designing and elaborating of new chiral inducers (catalysts, including organocatalysts) and applying the new methods in the chemical synthesis of essential bioactive compounds. Within the project the mechanism/chemism of asymmetric transformations will be studied; a method for the synthesis of labeled compounds by asymmetric oxidation will be elaborated; possibilities of the synthesis of different chiral ligands and their complexes with metals (Ti, lanthanides etc) and the properties of the complexes will be investigated; the possibilities of the use of new chiral ligands in the asymmetric synthesis will be elucidated; in order to establish the structure/activity relationship of the new compounds (complexes), both, experimental and theoretical calculation will be used; general features of the interactions of substrate-chiral inducer in asymmetric oxidation and its enantioselectivity will be established; a method for the total chemical synthesis of 9,11-secoosterols will be elaborated; a method for the synthesis of ribose analogs will be developed; new anti-cancer and anti virus nucleosides will be developed; a new method for N-monoalkylated (tertiary) or dialkylated (quaternary) amine derivates will be developed; a method for cyclic amines starting from substituted aziridins will be developed; obtained compounds are used as chiral ligands and asymmetric organocatalysts.

Analytical Separation Methods in Biomedicine and Environmetal Chemistry

The research aims at developing new methods of analytical separation to the characterization of various samples of biological origin. The research will focus on the following.

- 1) A search for new buffers for CE using mixtures of organic solvents and ionic liquids.
- 2) The investigation of potential extragents and development of methods for the determination of the composition and antioxidative ability of plant extracts.
- 3) The miniaturization of CE instruments aiming at developing portable analyzers to solve environmental problems *in situ*.
- 4) The production of nanopore materials, aerogels, to be used to separate various analytes by electrochromatography.

Results:

1. Portable analyser was tested successfully in the field experiments with genuine chemical warfare agents
2. Proof of a principle of the CE-ESI-MS ja CE-MALDI-MS off-line interfacing using digital and droplet microfluidics was demonstrated.
3. New aerogels were synthesized

Biocatalytic stereochemical synthesis.**

Teadustöö kirjeldus:

Lipase-catalysed reactions of polyhydroxy compounds have been investigated.

Methods of the chemoenzymatic synthesis of deoxy sugar esters as well as hydroxy acid conjugates have been elaborated.

Drastic change in catalytic performance of a lipase in methanolysis of esters depending on methanol content in reaction medium has been studied.

Tähtsamad teadustulemused:

Modelling of solvation of *Thermomyces lanuginosa* lipase using MD simulation combined with docking studies was found to rationalize the steered catalytic performance of this enzyme in methanolysis of 11-acetyl-prostaglandin E2. Chemoenzymatic methods of synthesis of deoxy sugar esters of amino acids were elaborated.

T010, Bioaktiivsed liiidid - metabolism, signaalilülekanne ja regulatsioon , teema juht Samel Nigulas
Bioactive lipids - metabolism, signalling and regulation

2.1.1. Description of research objectives

Lipids are essential components of the cell membrane shown to play many dynamic roles in mediating and controlling a wide array of cellular activities including membrane structure, metabolic and gene regulation, protein structure and function, energy production, and signalling pathways. Lipid mediators have been intimately linked to the immune and inflammatory responses, cell proliferation and apoptosis, as well as shown to be major determinants in many pathologies, including diabetes, cancer, cardiovascular and neurodegenerative disorders. Lipid metabolizing enzymes and lipid-regulating and lipid-producing metabolic cascades have been targeted for drug development. The main goals of the research are: (i) elucidation of fundamental catalytic, metabolic and regulatory aspects of enzymes (cyclooxygenases, lipoxygenases and peroxidases) responsible for biosynthesis of lipid mediators, and (ii) study of regulatory mechanisms of lipoprotein metabolism by apolipoproteins and angiopoietins.

2.1.2. The most important finding

Several recent studies reveal a link between lipoprotein/lipid metabolism and virus infections. It is demonstrated that cell surface glycans and members of the low density receptor family, both are well known to mediate binding and uptake of lipoproteins to cell, interact also with several viruses. Furthermore, lipases and apolipoproteins influence binding of viruses to cell surfaces. Even life-cycle of viral replication depends on cholesterol and fatty acid biosynthesis. In the current collaborative study the mechanisms that regulate the action of adenovirus 37 (Ad37) were investigated. It is demonstrated that adenovirus type 37 interacts with previously unknown sialic acid-containing cell surface molecules. Ad37 is a leading cause of epidemic keratoconjunctivitis a severe and highly contagious ocular disease. Glycan array screening and surface plasmon resonance experiments revealed that the receptor-recognizing knob domain of the virus fiber protein specifically binds a branched hexasaccharide that is present in the GD1a ganglioside. Soluble GD1a glycan and GD1a-binding antibodies efficiently prevented Ad37 virions from binding and infecting corneal cells. Unexpectedly, the receptor is constituted by one or more glycoproteins containing the GD1a glycan motif rather than the ganglioside itself, as shown by binding, infection and flow cytometry experiments. Surface plasmon resonance, molecular modeling, nuclear magnetic resonance and X-ray crystallography measurements indicate that the two terminal sialic acids dock into two of three previously established sialic acid-binding sites in the trimeric Ad37 knob. Surface plasmon resonance analysis shows that the knob-GD1a glycan interaction has high affinity. These observations form a basis for the design and development of sialic acid-containing antiviral drugs for topical treatment of epidemic keratoconjunctivitis. Nilsson et al., *Nature Medicine*, 2011, 105-109.

T031A, Uued arvutusmeetodid keerukate biomolekulide siisteemide kirjeldamiseks, teema juht**Karelson Mati****Modeling of biomedically and environmentally important systems using computational chemistry**

The subject of the research has been the computational study of detailed mechanisms of interactions of chemical compounds with the living organisms and environment. The research has been carried out by the development of new computational methods and the respective software. The novel methodological approaches include development of (1) ab initio quantum-chemical descriptors for molecules in external fields; (2) new quantum molecular dynamics based molecular docking techniques; (3) new algorithms for the search of optimum conformational structure of flexible molecules; and (4) implementation of advanced mathematical methods for the structure-activity relationships. The methodology developed is applicable for the description and prediction of (1) physicochemical properties; (2) pharmacodynamic and pharmacokinetic data; (3) antiviral activity of compounds; (4) activity of mimetics of neurotrophic factors; (5) structure and properties of peptide delivery vectors.

Tähtsamad teadustulemused

Numerous biologically important properties of chemical compounds including their toxicity, bioavailability, micelle formation ability, model properties related to drug intestinal absorption (Caco-2, PAMPA) and solubility were successfully modeled using the QSAR/QSPR approach. Successful models were also developed for the prediction of cell-penetrating peptides. The extension of the the methods to predict the antiviral and anti-b-amyloid activities carbon nanostructures, e.g. fullerenes is of particular interest.

5.1

2.9 Struktuuriüksuses kaitstud doktoriväitekirjade loetelu (NB! struktuuriüksus lisab struktuuriüksuse töötaja juhendamisel mujal kaitstud doktoriväitekirjade loetelu)

Tatjana Knjazeva, keemia instituut

Teema: *New Approaches in Capillary Electrophoresis for Separation and Study of Proteins*
(Kapillaarelektroforeesi uued lahendused valkude lahutamisel ja uurimisel)

Juhendaja: prof Mihkel Kaljurand

Kaitses: 17.03.2011

Omistatud kraad: filosoofiadoktor (keemia)

Andrus Seiman, keemia instituut

Teema: *Point-of-Care Analyser Based on Capillary Electrophoresis* (Kapillaarelektroforeesil põhinev kaasaskantav analüsaator)

Juhendaja: prof Mihkel Kaljurand

Kaitses: 29.06.2011

Omistatud kraad: filosoofiadoktor (keemia)

Monika Mortimer, keemia instituut

Teema: *Evaluation of the Biological Effects of Engineered Nanoparticles on Unicellular Pro- and Eukaryotic organisms* (Sünteesitliste nanoosakeste bioloogiliste efektide hindamine üherakulistel pro- ja eukarüootsetel organismidel)

Juhendaja: prof Margus Lopp

Kaasjuhendaja: juhtivteadur Anne Kahru

Kaitses: 16.08.2011

Omistatud kraad: filosoofiadoktor (keemia)

Natalja Makarotševa, keemia instituut

Teema: *Analysis of Organic Species in Sediments and Soil by High Performance Separation Methods*
(Orgaaniliste ainete analüüs sette ja mulla proovides kõrgefektiivsete lahutusmeetodite abil)

Juhendaja: dotsent Viia Lepane

Kaitses: 23.08.2011

Omistatud kraad: filosoofiadoktor (keemia)

Kersti Tepp, keemia instituut

Teema: *Molecular System Bioenergetics of Cardiac Cells: Quantitative Analysis of Structure Function Relationship* (Molekulaarne süsteemibioenergeetika: südameraku struktuuri ja funktsiooni vaheliste suhetekvantitatiivne analüüs)

Juhendaja: prof Raivo Vilu

Kaasjuhendaja: juhtivteadur Valdur Saks

Kaitses: 7.10.2011

Omistatud kraad: filosoofiadoktor (keemia)

Anna-Liisa Peikolainen, keemia instituut

Teema: *Organic Aerogels Based on 5-Methylresorcinol* (Orgaanilised aerogeelid 5-metüürresortsinoolist)

Juhendaja: juhtivteadur Mihkel Koel

Kaitses: 10.10.2011

Omistatud kraad: filosoofiadoktor (keemia)

Jelena Gorbatšova, keemia instituut

Teema: *Development of Methods for CE analysis of Plant Phenolics and Vitamins* (KE meetodite väljatöötamine taimsete fenoolsete ühendite ja vitamiinide analüüsiks)

Juhendaja: prof Mihkel Kaljurand

Kaitses: 21.12.2011

Omistatud kraad: filosoofiadoktor (keemia)

2.10 Struktuuriüksuses järeldoktorina T&A-s osalenud isikute loetelu (ETIS-e kaudu esitatud taotluste alusel)

MJD2, New MS-based approaches for studies of conformation and aggregation of amyloidogenic peptides,
Gehenn Katja

MJD105, Structure-reactivity relationships in reactions at atoms of the third period elements, **Ploom Anu**

2.11 Struktuuriüksuses loodud tööstusomandi loetelu**US2011152346A1**

Use of oligonucleotides with modified bases in hybridization of nucleic acids

Taotlus esitatud: 14.02.2011

Autorid: Mati Karelson, Erkki Truve, Allan Olspert, Cecilia Sarmiento, Mart Saarma

Omanik: Balti Tehnoloogiaarenduse AS

Instituudid: YK, YT

EE05449B1

(2-Hüdroksü-3-okso-tsüklopent-1-enüül)-äädikhappe estrid ja meetod nendest ainetest (-)-R- ja (+)-S-homosidrunhappe gamma-laktooni ja vastavate (-)-R- ja (+)-S homosidrunhappe soolade valmistamiseks

Patent välja antud: 15.08.2011

Autorid: Margus Lopp, Anne Paju, Margus Eek, Marit Laos, Tõnis Pehk, Raissa Jäälaid

Omanikud: TTÜ, AS Cambrex Tallinn, AS VTAK

Instituut: YK

EE05457B1

4'-arüül-2',3'-dideoksünukleosiidi analoogid

Patent välja antud: 15.08.2011

Autorid: Margus Lopp, Anne Paju, Artur Jõgi, Kaarel Siirde, Raissa Jäälaid, Tõnis Pehk

Omanikud: TTÜ, AS Cambrex Tallinn, AS VTAK

Instituut: YK

EP2156374B1

A method for manufacturing of a smart packaging material

Patent välja antud: 05.10.2011

Autorid: Mati Karelson, Kaupo Karelson, Jaan Leis, Neinar Seli

Omanik: Raidenil OÜ

Instituut: YK
