- Pooljuhtelektronika teaduslabor, Semiconductor Electronics Research Laboratory (BaseLab MINAKO), Prof. Toomas Rang

2. Instituudi teadus- ja arendustegevuse (edaspidi T&A) iseloomustus

2.1. Description of the research activities:

Communicative Electronics Research Laboratory (Baselab SIE)

Investigation into spectrally sparse signals and sequences, with main emphasis on improved algorithms for synthesis and optimization continued. Possibility for optimization of the methods for synchronous real time processing of the spectrally sparse response from objects was investigated. Wide range of possible usability scenarios and application areas were under investigation, including those required for medical diagnosis; for analyzing of micro-droplets; materials and structures like smart composites; precise measurement of the properties of alloys; properties of algae; improvement of pulse oximetry with joint usage of electrical and optical impedance; investigation of the activity of neural cells (together with Chalmers Technical University in Gothenburg) and most importantly for effective differentiation between normal and cancerous tissue. New impedance measurement solutions for improvement of energy consumption estimation and energy efficiency in portable devices were targeted.

Solutions for usage in the field of medicine range for creation of an algorithm for generating vascular networks in small tissue scale for later usage during modelling of blood flow dynamics to investigation of transfer characteristics of vascular system. Work was carried out in cooperation with East Tallinn Central Hospital, North Estonian Regional Hospital, Sahlgrenska Hospitalet in Gothenburg and TAK ELIKO.

In the field of simulations an electric impedance measurement with 2 electrodes on the dynamic 3D vascular 1 layer network was investigated. The results of the simulation were impedance signals that show changing impedance signal due to pulsatile blood-flow in the small tissue patch.

Research was carried out on conversion and processing algorithms of adaptively oversampled and modulated signals with applications mainly in the impedance spectroscopy and image processing. End-applications range from determining properties of the materials and alloys to smart composites. Topics under investigation include embedded sensors, short range communication issues, signal processing and energy harvesting solutions in connection with composite materials. Solutions for precise measurement of the properties of alloys and (Euro-)coins have been developed based on the methods of the impedance spectroscopy.

Investigation of the possibilities of developing of novel solutions and algorithms for the fast and precise profiling of the roads, by using of the laser projection and smart image processing.

Most important results:

- Developing of the methods for optimal design of spectrally rich excitation signals for impedance spectroscopy. Applications yield the best results in the world at the moment. The implementation are patented (3 US patents).
- Development of methods for the monitoring of structures, materials and surfaces by the aid of novel 3D laser scanning (1 patent application), eddy current excitation and electromechanical impedance analysis (1 US patent).

Semiconductor Electronics Research Laboratory (BaseLab MINAKO)

Experimental and numerical study of wide and semi-wide bandgap materials based semiconductor devices; design and fabrication of improved semiconductor components using non-traditional technologies (e.g. DWT); Specific investigations (DLTS spectroscopy, numerical experiments) of electro-physical parameters (deep levels and their influence on electrical characteristics) in semiconductor structures.

Based on the currently available simulation models the potential failure of operation of the device could occur when the body of the diode package is not sufficiently cooled, reaching operating area where failure occurs due to device physics (increase of currents, inability to withstand reverse voltage) than thermal burnout. The abnormal high temperature must last for a long time to change the device internal structure through diffusion of impurities.

The DLTS spectra obtained from the analyzed p^+ -pin- n^+ structures demonstrate the presence of electron- and hole-type deep levels in all investigated samples. Within each group, the configuration of the spectra is identical. This indicates that the sources of defects are stable, reproducible and

depend on the variations in technology for epitaxial growth. The width of the space charge calculated from the *C-V* characteristic exceeds the width of *i*-layer and spreads into the *p* and *n* depletion regions. The permanent change in the capacitance over all the temperature range and the very weak dependence of the capacitance on the reverse voltage indicate that the thickness of the overcompensated layer practically coincides with the thickness of the space charge, as well as indicating evidence of a homogeneous spatial distribution of defects across the width of the space charge.

Together with the Furtwangen University of Applied Sciences (Germany) the investigation of the exposure possibilities of the direct laser tool and of selection a suitable photoresist for 3D (greyscale) applications and to provide the preliminary process solution for fabricating greyscale structures in the photoresist have been done. The result of the development work has reached the proposals of most suitable photoresists and developers because of its properties like thickness and contrast, which were easily adjustable to process parameters.

The finalization of the cooperation with TI leaded to development of new lay-out realization for low voltage and low noise application in a single LDO. Special low noise architecture was implemented to improve noise performance. This was achieved by taking out all the main noise contributors like resistive divider with a reference amplifier into a separate group and then passing the resulting signal through a low pass filter with a very large time constant onto a voltage follower. This resulted in extremely low output noise which was verified by both simulation and measurement.

Most important results:

- The nature of the defects associated with the energy level EL_2 is generally caused by atomic permutation or to atomic vacancy complex mechanisms. We showed that important that during the LPE growth of epitaxial GaAs layers the EL_2 -level together with HL_2 -trap (B center) and HL_5 -trap (A-center) participates in the formation of *i*-layer. The appearance of the donor deep level EL_2 is observed at the onset crystallization temperature $T_{\text{cryst}} > 850^{\circ}\text{C}$, and thus the EL_2 level can act as a control engine for A- and B- centers in *i*-region of GaAs *pin*-structures.
- The applied research for photoresist development concludes that the slope structures introduced the proof that the tactile sensor is applicable for visually impaired people. The provided greyscale solution is suitability for more sophisticated structures (e.g. lenses).

2.7 Instituudi teadus- ja arendustegevuse teemade ja projektide nimetused (*Eesti Teadusinfosüsteemi, edaspidi ETIS, andmetel*)

- Haridus- ja Teadusministeerium
- Institutsionaalne uurimisteema:

IUT19-11, Impedants-spektroskoopia põhine objektide identifitseerimine ja juhtimine: signaalid, algoritmid, energiasäästlikud lahendused, Min Mart (2014 – 2019)

- baasfinantseerimise toetusfondist rahastatud projektid (sh TTÜ tippkeskused):
- riiklikud programmid:
 - Teiste ministeeriumide poolt rahastatavad riiklikud programmid:
AR12139, Smart composites: design and manufacturing, National R&D program „Materials technology“. RP Materjalitehnoloogia teadus- ja arendustegevuse toel (01.07.12 - 31.12.14)
Involved researchers: Olev Märtens, Raul Land, Rauno Gordon, Mart Min, Ago Mõlder

Uurija-professori rahastamine:

- Eesti Teadusagentuur
- grandid:

ETF9394, Elektriliste kudede diagnostikameetodite arendamine veresoonkonna dünaamilisi mõjutusi arvestades, Gordon Rauno (2012 – 2014)

ETF8592, Laia keelutsooniga materjalidel baseeruvad integreeritud Schottky ja heterosiirded: tehnoloogiad ja modelleerimine, Rang Toomas (2011 – 2014)

Instituut osaleb kahes Eesti teekaardi projektis:

5. Eesti kiirekanal MAX-IV sünkrotonkiirguse allikale (ESS - European Spallation Source) projektis (koordinaator Prof. Toomas Rang).
8. Eesti osalus Euroopa Tuumauuringute Keskuses (CERN) projektis (koordinaator Prof. Mart Min).

ESS projekti raamides alustati 2014 *in-kind* projekti ettevalmistusi kiirendi toitemuundurite väljatöötamiseks koostöös TTU Elektrotehnika instituudi ja Lundi Ülikooliga. Tegevus jätkub aastal 2015.

Jaanuaris 2015 kirjutas EV haridusminister alla Eesti liitumise European Spallation Source ERIC-uga ja Eesti on Roots, Taani ja Ungari järel neljas riik, kes statuudile alla kirjutas ning kuulub üle-euroopaliku initsiatiivi asutajariikide hulka.

Kaitses: 30.05.2014

Omistatud kraad: filosoofiadoktor (elektroonika)

Jana Toompuu, Thomas Johann Seebecki elektroonikainstituut

Teema: Investigation of the specific deep levels in p-, i- and n-regions of GaAs p+-pin-n+ structures

Juhendajad: Prof. Toomas Rang ja Dr. Oleg Korolkov

Kaitses: 12.12.2014

Omistatud kraad: filosoofiadoktor (elektroonika)

2.10 Struktuuriüksuses järeldoktorina T&A-s osalenud isikute loetelu (*ETIS-e kaudu esitatud taotluste alusel*)

2.11 Struktuuriüksuses loodud tööstusomandi loetelu

1. Estonian Application:

P201400044, O.Märtens, A. Mölder, R.Land et al, (18.12.2014). Method and Device for acquiring stream of the precisely time-stamped images (Pideva täpsete aja-templitega pildivoo kujutiste hõivamise meetod ja seade).

2. USA Application

USA Patents

1.USA patent **US 8854030B2** (07.10.2014). Method and device for frequency response measurement Inventors: Olev Märtens, Mart Min, Raul Land, Paul Annus, Tõnis Saar, Marko Reidla.

2.USA patent **US 8773151B2** (08.07.2014). Method and device for multichannel multifrequency analysis of an object. Inventors: Mart Min, Paul Annus, Antti Haapala, Alar Kuusik, Raul Land, Toomas Parve, Ants Ronk.

3.USA Patent **US 8674680B2** (08.03.2014). Method and device for fast measurement of frequency response with scalable short chirp signals. Inventors: Mart Min, Toivo Paavle, Raul Land, Paul Annus, Toomas Parve.

Osalemine konverentsidel.

1. Mart Min, 15-16.12.2014, Annual Conference 2014 of the University of Tartu (Institute of Molecular and Cell Biology, Estonian Genome Centre and Estonian Biocentre), Tartu. Ettekanne "Electrical bioimpedance: what it is and how to eat it?"
2. Mart Min, 7-9.11. 2014, Füüsika Sügiskool (Tartu Ülikool), Nelijärve. Ettekanne "Inimene ja impedants: rakendused meditsiinis".
3. Mart Min. 02-03.10.2014, 20 Years Anniversary Conference of Estonian Society for Biomedical Engineering and Medical Physics and the Department of Biomedical Engineering, Tallinn. Ettekanne: Electrical Impedance in biology and medicine.
4. Mart Min. 7-11.09.2014, 6th European Conference of the International Federation for Medical and Biological Engineering (MBEC 2014), Dubrovnik (Croatia). Ettekanne: Modular System for Spectral Analysis of Time-Variant Impedances.
5. Toivo Paavle. 06-08.10.2014, Baltic Electronics Conference (BEC2014) Tallinn/Laulasmaa. Ettekanne: Time-domain manipulating of short-time chirps: Improvement energy and spectral properties.
6. Andrei Krivoshei. 06-08.10.2014, Baltic Electronics Conference (BEC2014) Tallinn/Laulasmaa. Ettekanne: Electrical Bio-Impedance based non-invasive method for the central aortic blood pressure waveform estimation.
7. Yar M. Mughal. 14-16.10.2014, 16th Nordic-Baltic Conference on Biomedical Engineering & Medical Physics and the 10th MedTech Days 2014, Gothenburg, Sweden. Ettekanne: Development of a Bio-Impedance Signal Simulator on the basis of the Regression based Model of the Cardiac and Respiratory Impedance Signals.
8. Yar M. Mughal. 8-10.12.2014. IEEE Conference on Biomedical Engineering and Sciences (IECBES 2014), Miri, Sarawak, Malaysia. Ettekanne: An Overview of the Impedance Models of the Thorax and the Origin of the Impedance Cardiography Signal and Modeling of the Impedance Signals.
9. Frederick Rang. Participation at the Microsoft TechEd Europe 2014 conference, 26.-02.11.2014, Fia de Barcelona, Madrid, Spain.
10. Yannick Le Moullec, Conference "Asia Pacific Signal and Information Processing Association Annual Summit and Conference 2014 (APSIPA ASC)", organized by Asia Pacific Signal and Information Processing Association (APSIPA); 9-12 December 2014, Siem Reap, Cambodia; oral presentation of our paper "A Modular 6LoWPAN-based Wireless Sensor Body Area Network for Health-Monitoring Applications", Le Moullec, Y.; Lecat, Y.; Annus, P.; Land, R.; Kuusik, A.; Reidla, M.; Hollstein, T.; Reinsalu, U.; Tammemäe, K.; Ruberg, P.
11. Olev Märtnens, EDERC Texas Instrumrnts'i (TI) EUP (Europan University programm korraldatud, koostöös IEEE-ga) ja Eurasip'iga, 11-12. September 2014, Milano, Itaalia. Ettekanne: Martens, O.; Pille, S.; Reidla, M. (2014). Capacitance Measurement With MSP430 Microcontrollers. *In: Proceedings: EDERC2014 : EDERC2014 (Embedded Design in Education & Research Conference), Milan (Italy), 11-12 September 2014. (Toim.) J.J.Soraghan et al.* Milano, Italy: IEEE, 2014, 260 - 263.
12. Toomas Rang, Osalemine konverentsi „The 2014 International Conference on High Performance and Optimum Design of Structures and Materials“, Oostende 9-11 juuni, Belgium“ juhtkomitee koosolekul.
13. Mart Min, 23-27.09.2014, 7th International Workshop on Impedance Spectroscopy. Tutorial: Spectroscopy of time-variant impedances.

Thomas Johann Seebecki elektroonikainstituut koostöös Arvutitehnika instituudiga korraldas järjekorras juba 13. rahvusvahelise konverentsi „Baltic Electronic Conference BEC2014“. Prof. Toomas Rang programmikomitee esimees ja juhtkomitee liige ning Prof. Peeter Ellervee programmikomitee ase-esimees ja juhtkomitee liige. Konverents toimus 6-8 oktoobrini Tehnikaülikoolis (Mektory maja) ja Laulasmaa SPA Konverentsikeskuses.

Osalemine koolitustel:

1. Mart Min. Loeng-tutorial (3-es osas) „Signals in Impedance Spectroscopy “Chemnitz’i Tehnikaülikoolis Saksamaal (90 osalejat), 24.09.2014.
