Our research group is committed to producing ambitious cutting-edge work in the field of private law, having a special focus on private legal relationships in digital environments. Primarily designed to iteratively *develop expertise* on these matters, members of the research group aim to *share* and *disseminate* their work to complement legal and social discourses and, where identifiable and thus necessary, actualize societal change therein. We aim to *contribute* to international, European, national and regional debates on these matters, *address* traditional and novel legal problems with a varied toolbox of methods, and, where appropriate, based on developed expertise, propose nuanced policy-recommendations and context-specific legal advice.

We intend to achieve this by interdisciplinarity, scholarly thoroughness, and the courage to go beyond the mainstream of research in our discipline. Big data, IoT, AI and the respective legal interferences of their implementation and use in society form the core subject of our research, but we have also focused on legal implications of the Gig-economy, competition law and data governance issues in Smart Cities, digital evidence, online dispute resolution and LegalTech. Also research on HCI and HCI research methods, mixed research methodology, international business transactions international mediation forms an essential part of our competencies.<sup>1</sup>

The research group draws inspiration from interdisciplinary scholarships, thereunder Science and Technology Scholarship (STS) and incorporates elements of the Value-Sensitive Design framework into discussions on societally acceptable, inclusive, human-centric and thus innovative governance
