

**MATEMAATIKA-LOODUSTEADUSKOND**  
**MATEMAATIKAINSTITUUT**  
**TEADUS- JA ARENDUSTEGEVUSE AASTAARUANNE 2012**

## **1. Instituudi struktuur**

**Matemaatikainstituut, Department of Mathematics**  
**Instituudi direktor Jaan Janno**

- Algebra ja geomeetria õppetool, Chair of Algebra and Geometry, Peeter Puusemp
- Matemaatilise analüüsiga õppetool, Chair of Mathematical Analysis, Gert Tamberg
- Rakendusmatemaatika õppetool, Chair of Applied Mathematics, Jaan Janno
- Matemaatilise füüsika õppetool, Chair of Mathematical Physics, Eugen Paal

## **2. Instituudi teadus- ja arendustegevuse (edaspidi T&A) iseloomustus**

(NB! punktid 2.1- 2.6 täidab struktuuriüksus)

### **2.1 struktuuriüksuse kooseisu kuuluvate uurimisgruppide**

#### **2.1.1 teadustöö kirjeldus (inglise keeles);**

- *Chair of Algebra and Geometry* The main topic of the studies is group and semigroup theory
- *Chair of Mathematical Analysis* The main topics are summability theory and sampling operators with applications in imaging
- *Chair of Applied Mathematics* The main topics are inverse problems, integral equations and methods of mathematical statistics
- *Chair of Mathematical Physics* The main topic is the development of operad methods with the orientation to applications in natural sciences, physics and technology.

#### **2.1.2 aruandeaastal saadud tähtsamad teadustulemused (inglise keeles).**

- *Chair of Algebra and Geometry* It was proved that each multiple wreath product of copies of a finite cyclic group of a prime power order is determined by its endomorphism monoid in the class of all groups. Using this result, it was proved that every Sylow subgroup of a finite symmetric group is determined by its endomorphism monoid in the class of all groups. It was concluded from these results that each finite  $p$ -group is embeddable into a finite  $p$ -group which is determined by its endomorphism monoid. Some results on endomorphism monoids of medial quasigroups were obtained. It was proved that medial quasigroups cannot distinguished by their endomorphism monoids, but idempotent medial quasigroups can be determined by their endomorphism algebras which incorporate four algebraic operations. It was proved that idempotent medial commutative quasigroups with finite endomorphism monoids are also finite. (P. Puusemp). As an application to the Voronoi theory of perfect quadratic forms over algebraic number fields a method for subdividing the open polyhedral cone  $(\mathbb{R}_+)^r$  by Voronoi perfect polyhedras was developed. The endomorphisms of medial idempotent quasigroups were studied. A counterexample

was found to demonstrate that neither finite deponent medial quasigroups nor finite commutative medial quasigroups are determined by their endomorphism monoids. The Baer-Kaplansky theorem for Abelian groups to idempotent medial quasigroups was generalized as follows: if the endomorphism algebras of idempotent medial quasigroups  $Q$  and  $Q'$  are isomorphic, then  $Q$  and  $Q'$  are isomorphic too (A. Leibak).

- *Chair of Mathematical Analysis* Sampling operators, defined using an even band-limited kernel function were considered. It was shown that the truncation error, which is introduced when we use for some band-limited kernels finite sums instead of the sampling series, decreases so fast that in practice there is not so much difference if we use kernels with finite support or rapidly decreasing band-limited kernels. Some estimates were proved and some exact norms of truncation error for some sampling series were computed. Some sampling operators with averaged kernels were studied. Some estimates of approximation error for generalized sampling series in terms of averaged modulus of smoothness were proved (G. Tamberg). Tauberian remainder theorems for Cesàro method of summability using the general control modulo of the oscillatory behaviour were studied. In particular, the ideas of İ. Çanak, Ü. Totur and M Dik were applied. Several new Tauberian remainder theorems for (C,1) were proved (O. Meronen).
- *Chair of Applied Mathematics* The method to deduce adjoint problems for cost functionals of inverse problems for parabolic integro-differential equations that use instant and integral measurements of temperature was further developed. The method was generalized to the cases of nonlinear inverse problems of coefficient type (J. Janno, K. Kasemets). The nonparametric trend analyses were applied on Estonian rivers pollution load analysis. Mann-Kendall test based on rank correlation was mainly used on studying the dynamics of rivers loadings in last 40 years. The distributions of skewness and kurtosis measures were modelled. The central limit theorem was applied on this kind of modelling. Obtained results were generalized to multivariate asymmetric distributions. These results can significantly improve the diagnostic of statistical models (M. Pihlak).
- *Chair of Mathematical Physics* Function theory on quantum complex hyperbolic spaces was developed. Explicit formulas for invariant integrals on 'finite' functions on a quantum hyperbolic space and on the associated quantum isotropic cone were obtained. Also the principal series of  $U_q[\mathfrak{su}_{n,m}]$ -modules related to this cone were established, and the necessary conditions for those modules to be equivalent were obtained. It was proved that if the neutral component in a finitely-generated associative algebra graded by a finite group has a Shirshov base, then so does the Ahole algebra. The following classes of Lie algebras were studied: anisotropic, regular, minimal nonabelian, and algebras of depth 2. A concept of Mal'tsev pair was presented and developed, which is based on the generalised Maurer-Cartan equations of the local analytic Moufang loop. The triality can be seen as a fundamental property of such pairs. Based on the triality the Yamagutian was constructed. Properties of the Yamagutian were studied (E. Paal, P. Zusmanovich, O. Bershteyn).

**2.3** Loetelu struktuuriüksuse töötajate rahvusvahelistest tunnustustustest.

**2.4** Loetelu struktuuriüksuse töötajatest, kes on välisakadeemiate või muude oluliste T&A-ga seotud välisorganisatsioonide liikmed.

- J. Janno, G. Tamberg ja P. Puusemp on Ameerika Matemaatikaühingu liikmed
- J. Janno, P. Puusemp, M. Pihlak ja G. Tamberg on Eesti Matemaatika Seltsi liikmelisuse kaudu Euroopa Matemaatika Seltsi liikmed.
- G. Tamberg on järgmiste rahvusvaheliste erialaliitude liige: Society for Industrial and Applied Mathematics (SIAM), Institute of Electrical and Electronics Engineers (IEEE).

**2.5** Aruandeaasta tähtsamad T&A finantseerimise allikad.

**2.6** Soovi korral lisada aruandeaastal saadud T&A-ga seotud tunnustusi (va punktis 2.3 toodud tunnustused), ülevaate teaduskorralduslikust tegevusest, teadlasmobiilsusest ning anda hinnang oma teadustulemustele.

- J. Janno sai 2012.a riigi teaduspreeemia täppisteaduste alal uurimuste tsükli "Pöördülesanded mittehomogeensete materjalide ja keskkondade omaduste määramiseks" eest.
- E. Paalile omistati Tallinna konverentsisaadiku nimetus.
- E. Paal on ajakirjade (Ashdin Publisher) Journal of Generalized Lie Theory and Applications ja Journal of Physical Mathematics peatoimetaja.
- J. Janno on ajakirjade Mathematical Modelling and Analysis, Abstract and Applied Analysis ja The Open Acoustics Journal toimetuskolleegiumite liige.
- Matemaatilise füüsika õppetool osaleb rahvusvaheliste koostöövõrgustike AGMP ja ISQS tegevuses, samuti rahvusvaheliste konverentsikogumike toimetamises.
- 2012.a toimus matemaatilise füüsika õppetooli korraldamisel Tallinnas rahvusvaheline konverents „3Quantum: Algebra, Geometry, Information“.
- Rakendusmatemaatika õppetool osaleb konverentsivõrgustiku Mathematical Modelling and Analysis töös.
- 2012.a toimus rakendusmatemaatika õppetooli korraldamisel Tallinnas rahvusvaheline konverents MMA2012.
- P. Puusemp viibis 1-9. 12.2012 Eesti ja Ungari Teaduste Akadeemiate teadlaste vahetusprogrammi raames teadustööl Ungari Teaduste Akadeemia Alfred Renyi Matemaatika Instituudis.
- P. Puusemp, J. Janno ja G. Tamberg on Eesti Matemaatika Seltsi juhatuse liikmed ja J. Janno on Eesti Operatsioonianalüüsi Seltsi juhatuse liige.

**2.7** Instituudi teadus- ja arendustegevuse teemade ja projektide nimetused (*Eesti Teadusinfosüsteemi, edaspidi ETIS, andmetel*)

- Haridus- ja Teadusministeerium
  - sihtfinantseeritavad teemad:  
T011, Algebra ja analüüsi kaasaegsed rakendusmeetodid diferentsiaal- ja integraalvõrandite teorias, matemaatilises füüsikas ja statistikas, Puusemp Peeter (2009 – 2014)

- baasfinantseerimise toetusfondist rahastatud projektid (sh TTÜ tippkeskused):
  - riiklikud programmid:

- Teiste ministeeriumide poolt rahastatavad riiklikud programmid:

- Uurija-professori rahastamine:

- SA Eesti Teadusfond/Eesti Teadusagentuur

- grandid:  
ETF9038, Operaadid, deformatsioonid, dünaamika, Paal, Eugen (2012 – 2015)

- ETF9383, Kaalutud keskmised, Tamberg Gert (2012 – 2015)

- ühisgrandid välisriigiga:
  - järeldoktorite grandid (SA ETF ja Mobilitas):

ERMOS7, Zusmanovich Pasha, Lie algebrate kohomoloogia, mitteassotsiatiivsed struktuurid, dünaamilised süsteemid ja operaadid. (1.12.2010 - 30.11.2013)

ERMOS83, Bershtein Olya, Kvant-Harish\_Chandra moodulite geomeetrilised realisatsioonid, mittekommunitatiivne kompleks ja harmooniline analyys (1.12.2011 - 1.12.2013)

- tippteatlase grandid (Mobilitas):

- Ettevõtluse Arendamise SA

- eeluuringud:

- arendustoetused:

- SA Archimedeseega sõlmitud lepingud

- infrastruktuur (nn „mini-infra“, „asutuse infra“):

- Eesti tippkeskused:

- riiklikud programmid:

- muud T&A lepingud:

- SA Keskkonnainvesteeringute Keskusega sõlmitud lepingud:

- Siseriiklikud lepingud:

- EL Raamprogrammi projektid:

- Välisriiklikud lepingud:

**2.8** Struktuuriüksuse töötajate poolt avaldatud eelretsenseeritavad teaduspublikatsioonid (*ETIS klassifikaatori alusel 1.1, 1.2, 1.3, 2.1, 2.2, 3.1, 3.2, 3.3, 4.1 ja 5.1*).
